CHAPTER FIVE

MOTIVATION

&

EMOTION

WHAT IS MOTIVATION?

Introduction

- The word "Motivation" comes from the Latin word "Mover", which means "to move"
- Motivation is what "moves" people to do the things they do
- It is the process by which activities are:
  - Started,
  - Directed and
  - Continued

  } so that physical or psychological needs are met

Cont …

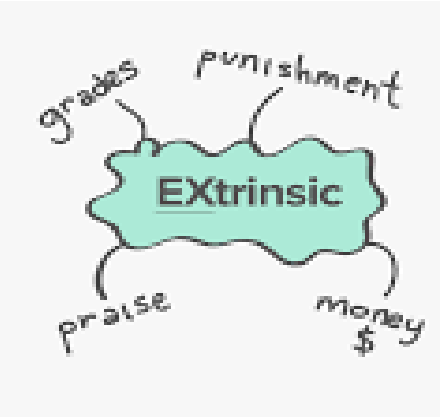

- Motivation is an inner state that guides and drives human behavior
  - A **need** or **desire** that *energizes* behavior and *directs it* towards a goal.

➢ **There are two major types of motivation**

- **Extrinsic Motivation:** a desire to perform a behavior because of:

  - Promised reward or

  - Threats of punishments.

Cont …

- **Intrinsic Motivation:** a desire to perform a behavior for its own sake and rewarding in its manner.

Example: If a person is hungry, The physical **need for hunger** causes him to **get up**, Directs him going to the kitchen Searches for food then finds or prepares something to eat

Theories of motivation

- **Instinct approaches to motivation**:
  - Biologically determined and innate patterns of behavior that exists in both people and animals – ***instincts***
  - Behaviors will be determined by innate factors and biologically based **that generally lead to** **survival**
  - Argues that organisms are preprogrammed to engage in behaviors that ensure survival and reproduction
  - Animals are governed by instincts migrating, nest building, mating and protecting their territory

Cont …

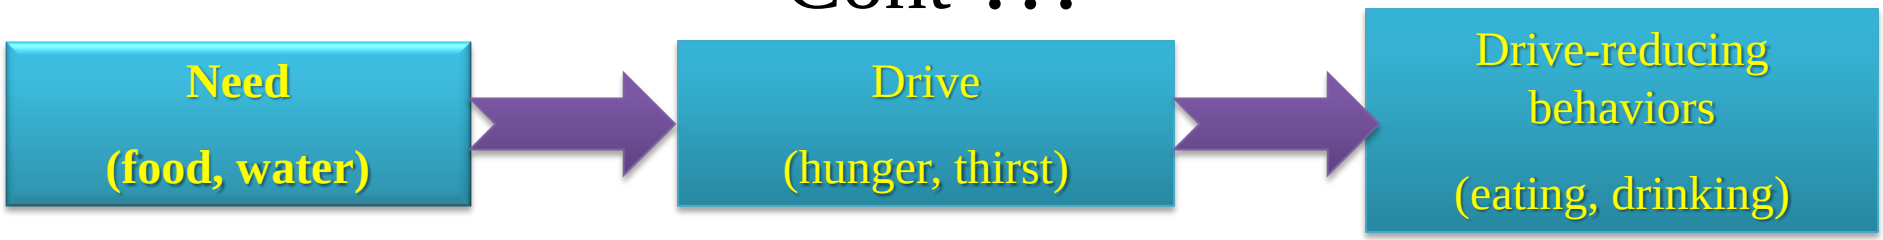

- According to these instinct approach in humans:
  - The instinct to reproduce is responsible for sexual behavior, and
  - The instinct for territorial protection may be related to aggressive behavior
  - **Instincts: are** inborn patterns of behavior that are not learned

Cont …

- ***Drive-Reduction Theory***:

- Drive: is a state of tension or arousal that mobilizes the organism to fulfill some need.
- *An* idea that a physiological need create a state of tension (a drive) motivating the organism to satisfy lacking needs
- It states that a person will eat food as a result of a hunger drive (a state of tension that humans seek to correct).
- The theory aims for ***homeostasis***, or **biological balance** & **equilibration**

Cont …

- It is the maintenance of an optimum level of biological conditions within an organism
- ***There are two kinds of drives:***
  - ***Primary drives*** are those that involve survival needs of the body such as **hunger** and **thirst**

  - ***Secondary drives*** are those that are learned through experience or conditioning, such as the need for money, social approval.

Cont …

- ***Arousal Approaches:***
  - The goal is to maintain or increase excitement
  - According to **arousal approaches to motivation,** individuals are motivated either to maintain a certain level of stimulation and activity
    - Excitement or increase excitement
- ***Incentive theory*** proposes that individuals are motivated by a desire to obtain external incentives such as **money, affection** and **grades**

Cont …

- ***Cognitive Approaches: suggest***

  - Motivation is a result of people's thoughts, beliefs, expectations and goals
  - *Intrinsic motivation:* causes us to participate in an activity for our enjoyment rather than for any actual or concrete reward
  - *Extrinsic motivation:* causes us to do something for money, a grade or some other actual, concrete reward.

Cont …

Example: If a teacher provides tutorial to help students – intrinsic but if to get more money - extrinsic

- ***Humanistic approach to motivation: states***
  - That ***human behavior*** is influenced by a ***hierarchy***, or ***ranking***, of five classes of needs, or motives
  - Lower level motives should be met before going in to the other ***higher level motives***

Cont …

- Maslow's hierarchy of needs are:

Cont …

- ***Physiological needs-*** these are biological requirements for human survival:

Example: air, food, drink, shelter, clothing, warmth, sex, sleep

- ***Safety needs-*** protection from elements:

  - Security, order, law,
  - Stability, freedom from fear

Cont …

- ***Love and belongingness needs-*** are

  - Human social needs and

  - Involves feelings of belongingness.

Examples: include friendship, intimacy, trust, and acceptance, receiving and giving affection and love Affiliating, being part of (family, friends, and work)

Cont …

- ***Esteem needs***- the need to be:

  - Respected as a useful, honorable individual;

☞ Maslow classified it in to two:

- i) Esteem for oneself :

  - Dignity, achievement, mastery, and
  - Independence

- ii) The desire for reputation or respect from others (e.g., status, prestige/respect).

Cont …

- ***Self-actualization needs-*** is

- Realizing personal potential,

- Self-fulfillment,

- Seeking personal growth and peak experiences.

i.e. A desire to become everything one is capable of becoming".

Conflict of Motives and Frustration

- **There are four basic types of motivational conflicts:**

  - Approach-approach conflicts **- exist** when we must choose only one of the two desirable activities.

Example: going to a movie or a concert.

  - Avoidance-avoidance conflicts **-** arise when we must select one of the two undesirable alternatives.

Example: Someone forced either to sell the family home or to declare bankruptcy.

Cont …

- Approach-avoidance conflicts - happen when a particular event or activity has both attractive and unattractive features,

Example: having a good grade to join university but assigned to a remote university geographical setting

- Multiple approach-avoidance conflicts - exist when two or more alternatives each have both positive and negative features.

Cont …

Example:

Suppose you must choose between two jobs. One offers a high salary with a well-known company but requires long working hours and relocation to a miserable climate. OR

The other boasts advancement opportunities, fringe benefits, and a better climate, but it doesn't pay as much and involves an unpredictable work schedule

EMOTION

- **What is emotion?**

Cont …

- Emotion is the "**feeling**" aspect of consciousness, characterized by:
  - Certain physical arousal behavior
  - That reveals the feeling to the outside world, and
  - An inner awareness of feelings

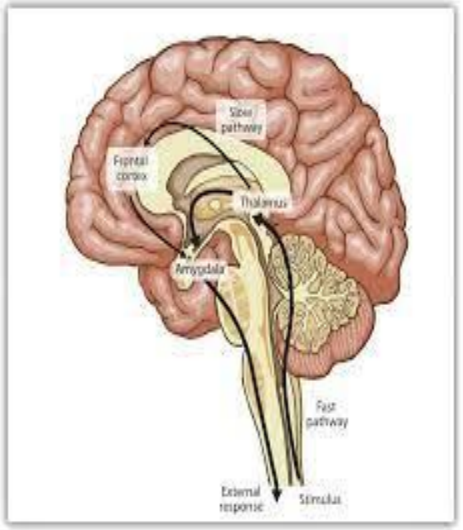

Think the last time you were angry & frightened

The Three Elements of Emotion

- **The Physiology of Emotion:** when a person experiences emotion,
  - The physical arousal is created by the sympathetic nervous system:
    - Heart rate increases,
    - Breathing becomes more rapid,
    - The pupils of the eye dilate, and
    - The mouth may become dry

Cont …

- **The behavior of emotion**: *tells us how people behave*

  - Facial expressions,
  - Body movements, Actions
  - Frowns smiles, sad expressions and
  - Hand gestures

  } indicate how others behave

- **Subjective Experience**: interpreting the subjective feeling by giving it a label such as:

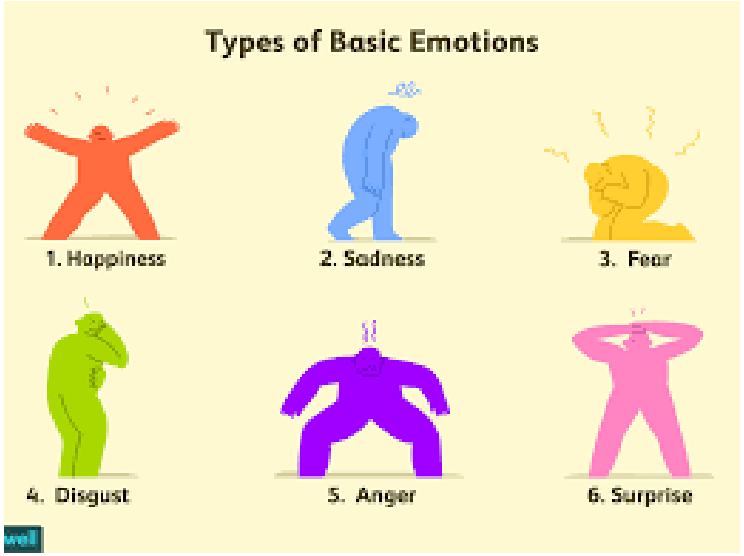

Cont …

- Anger, fear, disgust, happiness, sadness,
- Shame, interest, surprise and so on

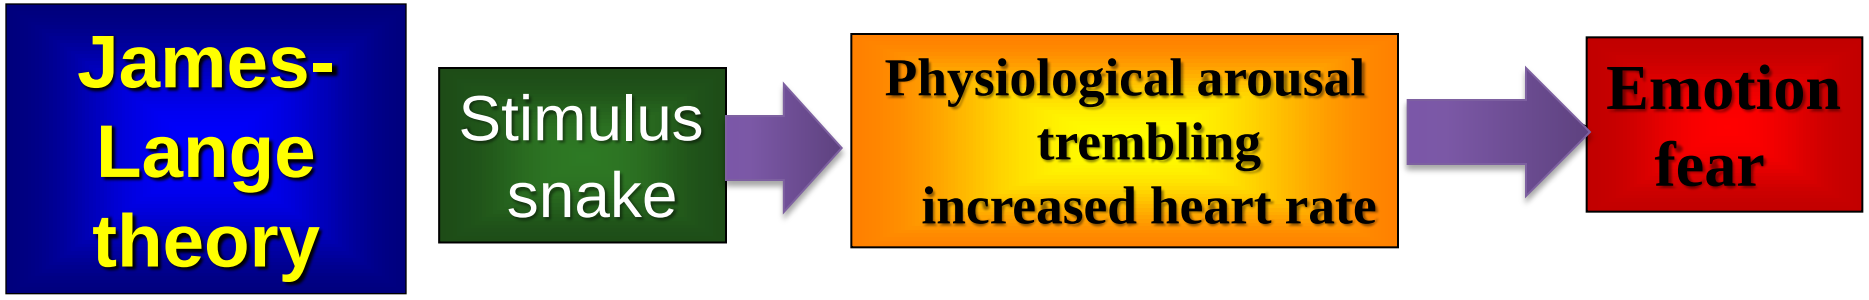

- The label is a subjective feeling and a learned response influenced by the persons:
  - Language and
  - Culture

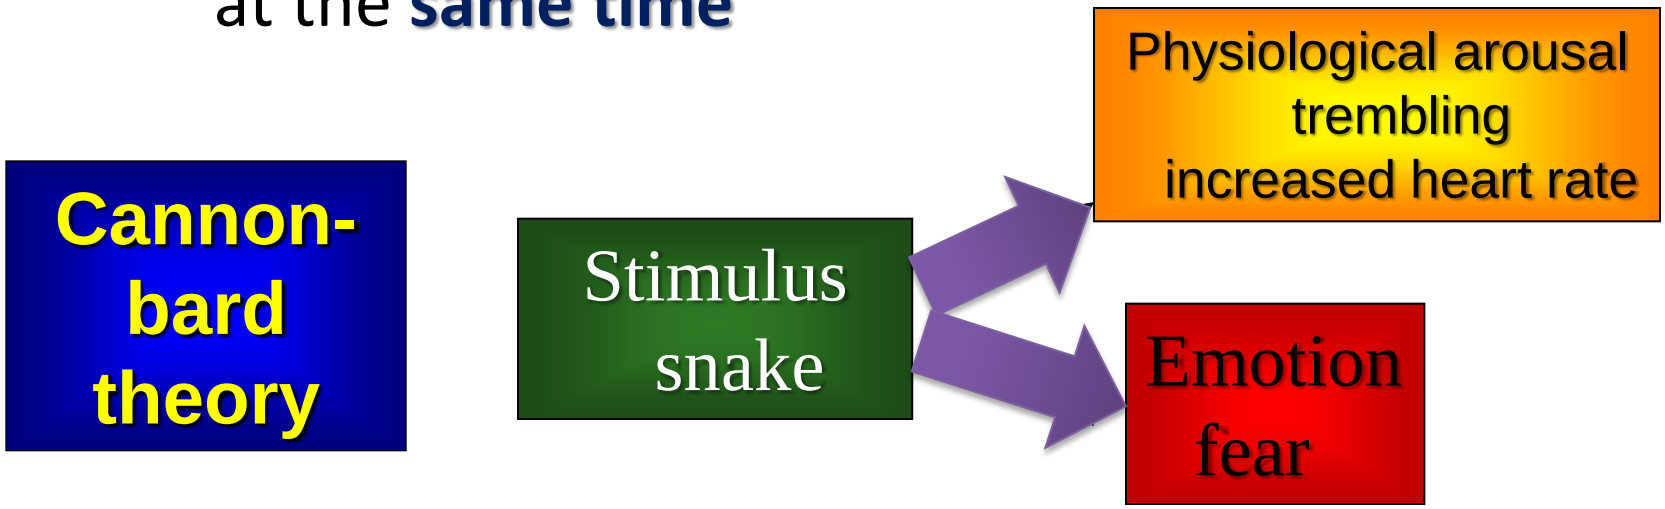

Theories of Emotion

- **James-Lang Theory**: proposed by William James and Carl Lange,
  - An emotion provoking stimulus produces **physiological** response/reaction
  - The perception of an environmental stimulus (such as a **growling** or **barking dog**) causes bodily changes (such as rapid heart beat and fast breathing)

Theories of Emotion

- **Cannon-Bard theory of emotion:** Physiologists Walter Cannon and (1927) and Philip Bard (1934) theorized that:
  - Emotion and physiological arousal occur more or less at the **same time**

Theories of Emotion

- **Schechter-Singer and Cognitive Arousal Theory:**
  - Proposed that two things have to happen before emotion occurs:
    - Our internal or cognitive state
    - The external situation we find ourselves in
